

**Job Description:**

- Collaborate with senior consultants and client teams to understand financial planning, budgeting, forecasting, and reporting requirements.
- Assist in the design, configuration, and testing of Oracle EPM Cloud modules (such as Planning, FCCS, PCMCS, or related EPM tools) under guidance.
- Participate in requirement-gathering workshops, document business processes, and help translate them into functional specifications.
- Support the development of reports, dashboards, and analytics to provide meaningful financial and operational insights.
- Assist in data mapping, data validation, and reconciliation between source systems and Oracle EPM applications.
- Contribute to system testing, user acceptance testing (UAT), and defect resolution by preparing test cases, executing tests, and documenting results.
- Prepare user guides, training materials, and basic documentation for configurations and processes.
- Provide post-implementation support, including issue tracking, basic troubleshooting, and coordination with technical teams.
- Stay updated on Oracle EPM features, best practices, and finance transformation trends through continuous learning and internal training.
- Work collaboratively with cross-functional teams (finance, IT, and business stakeholders) to ensure successful project delivery within timelines.
